1. Product Description
Intumescent Firestop Pillows are designed for use primarily in large openings with cables, cable trays, blank openings or multiple penetrating items. In the event of a fire, RectorSeal® Firestop Pillows will prevent the spread of flames and hot gases through the openings. Since no cure time is required, RectorSeal® Firestop Pillows are ready to install. RectorSeal® Firestop Pillows are reusable since they can be removed and reinstalled if necessary. Use RectorSeal® Firestop Pillows for various applications:

- Blank Openings
- Cable Tray Openings
- Multiple Penetration Openings
- Telecommunication Wires
- Computer Lines
- Retrofit/Re-enter Openings
- Temporary Installations
- Large Openings

For a complete list of product applications or for additional technical information call RECTORSEAL for the latest updated information.

- If wire mesh will be used, the pillows must be installed by being compressed a minimum of 20%.
- If wire mesh will not be used, the pillows must be compressed a minimum of 30%.

Example: (using 3"x9"x6" pillows without wire mesh)
12" x 24" opening = 288 sq. in.
3" x 18" cable tray = 54 sq. in.*
Subtract 54 sq. in. from 288 sq. in. to get the area to be firestopped:
opening = 288 sq. in.
less cable tray = 54 sq. in.
To be Firestopped = 234 sq. in.
Divide by 18.90 = 12.38 or 13 pillows.

NOTE: Always start with the largest pillow (3"x9"x6") to cover the maximum space. Use the smaller size to fill in where required.

3. Applications
Metacaulk® Firestop Pillows are generally used for larger openings. These openings may contain cables, cable trays, pipes, conduits or nothing at all. They are also excellent for temporary openings.

4. Installation Data
Estimate the number of bags required, by performing the following calculation.
A) Calculate the size in square inches of the opening to be firestopped.
B) Calculate the area in square inches required by the penetrating items.
C) Subtract (B) from (A) and divide by the coverage shown in chart 1.

The results of this calculation is the estimated number of bags required. RectorSeal® Firestop Pillows have been tested to give a choice of two methods:

- If wire mesh will be used, the pillows must be installed by being compressed a minimum of 20%.
- If wire mesh will not be used, the pillows must be compressed a minimum of 30%.

NOTE: All calculations are approximate. User must verify.
5. Testing Data
Metacaulk® Firestop Pillows are classified by Underwriters Laboratories as a Fill, Void or Cavity Material. For specific test criteria see UL Fire Resistance Directory or call RectorSeal. Metacaulk® Firestop Pillows were tested to a positive pressure at a minimum .01 inches of water in accordance with UL 1479 and ASTM E 814 test standards.

6. Storage & Handling
Metacaulk® Firestop Pillows should be stored between 0ºF and 150ºF. For easier installation, bring pillows to room temperature before installing. Keep products stored under protective cover, in their original containers. A stock rotation program is recommended.

7. Availability
Metacaulk® Firestop Pillows are packaged 10 per case.

8. Limitations
To be used only in the tested configurations or as recommended by RectorSeal.

9. Cautions
PRECAUTIONS: Do not take internally. May be harmful if swallowed. KEEP OUT OF REACH OF CHILDREN.
